Design process

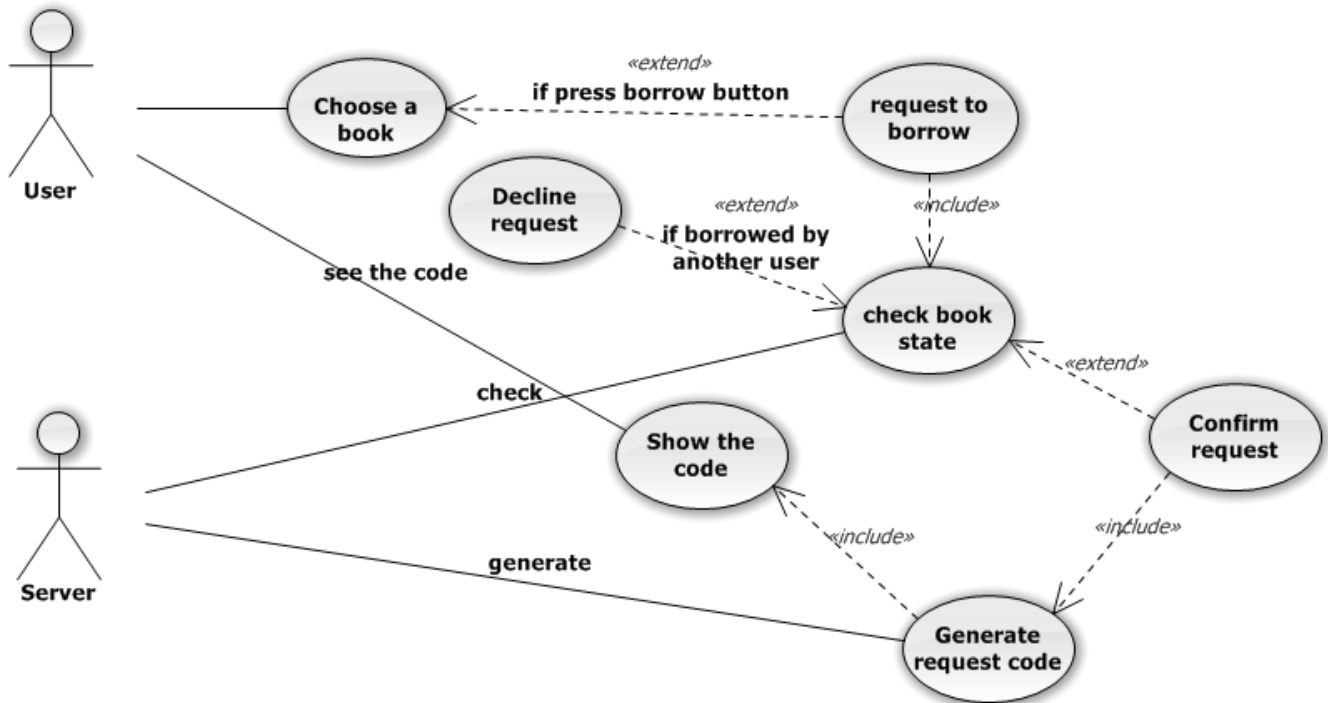

Our project will use the **waterfall design** process

The reason

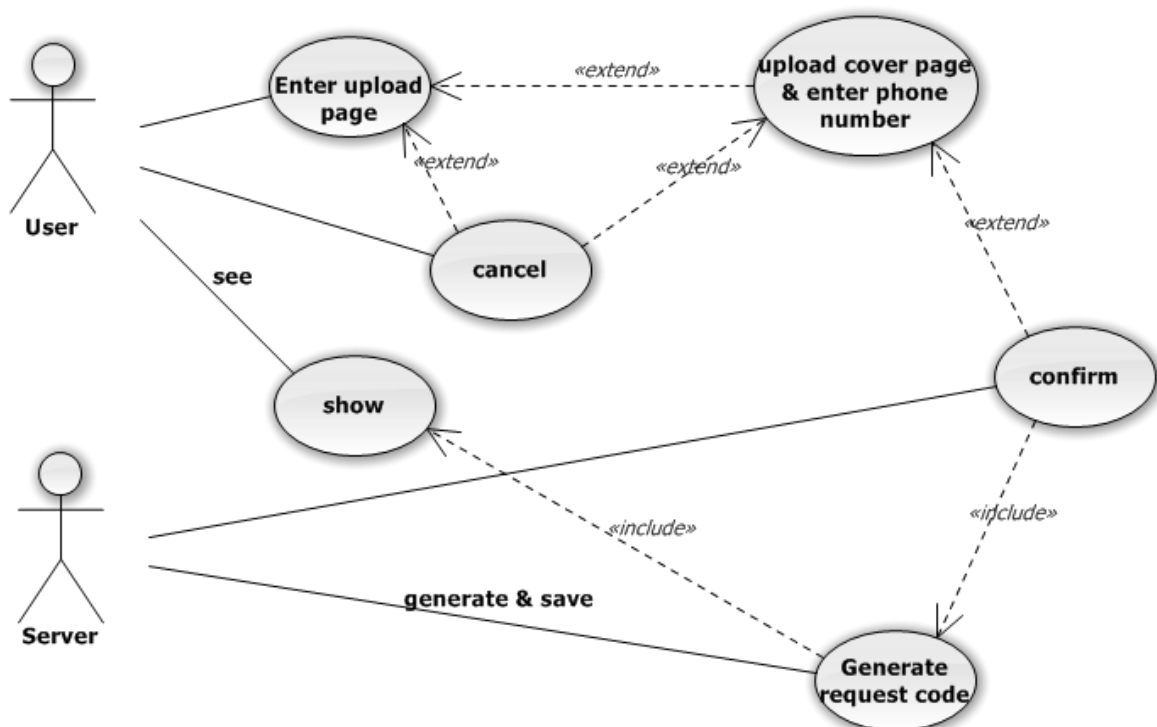

- 1- We knows and understand all the costumer requirements
- 2- It's faster for us, because the user will not change the requirements.
- 3- The user can wait to just see the final work.

Use case diagrams

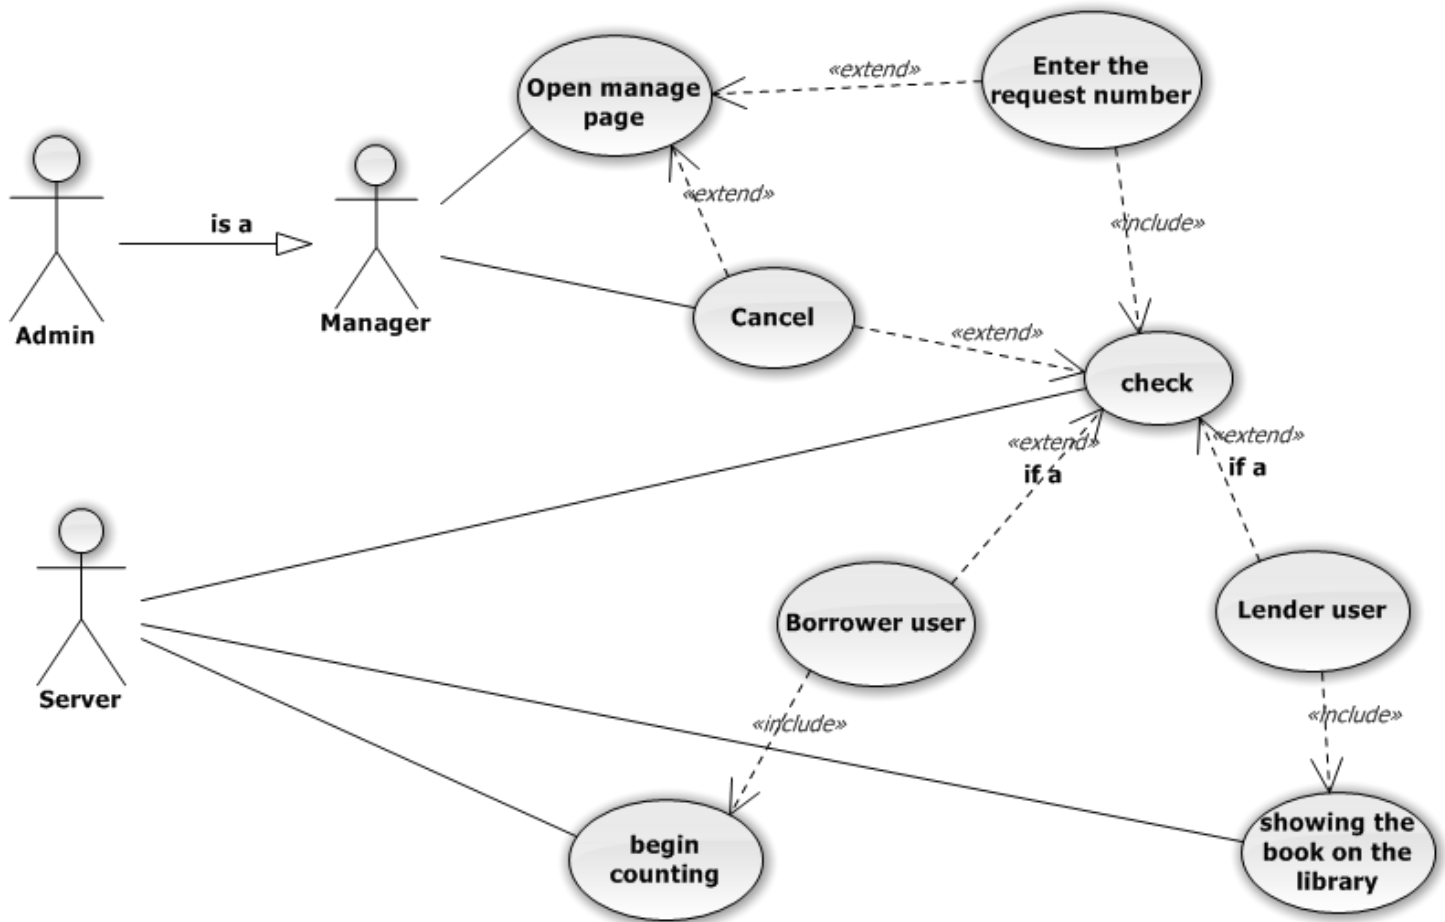

1- User want to borrow a book

2- User want to lend a book

3- Admin/Manager enter a request number

4- Daily server check
